

G-Cast Investment Powders

Use G-Cast Investment Powders for Unmatched Results

Expertly crafted using high-quality materials, including the purest gypsum and premium-grade Cristobalite, sourced from the USA. These powders offer unparalleled benefits such as an ultra-smooth casting surface, outstanding thermal shock resistance, and a prolonged working time. With their superior quality that surpasses industry standards, the commercial-grade G-Cast Investment Powders prove to be the ultimate choice for all your investment powder requirements.

Why G-Cast Investment?

- Made from the highest-quality materials
- Features “Blast Away” technology which allows the investment material to soften and melt away during the water-blasting process
- Surpasses industry standards
- Extensively tested for zero defect and triple tested for consistency

Introducing Our Series of G-Cast Products

2604920

G-Cast Apex (45 lbs)

\$38.50

Ideal for casting high-temperature gold alloys up to 22K including palladium, nickel, white gold, and silver.

G-Cast Apex is ultra-premium gypsum bonded investment that incorporates refractory ingredients along with specialized control chemicals to make it the most user-friendly investment on the market.

FEATURES

- Achieves the smoothest casting surfaces possible
- Reduces surface tension on wax to supply bubble-free castings
- Reliable consistency from batch to batch
- Eliminates surface defects
- Reduces finishing time, saving both time and money

Introducing Our Series of G-Cast Products

2604910

G-Cast RP Cast (45 lbs)

\$48.95

Ideal for casting of resin pattern materials, master models and carved waxes due to its advanced high-strength refractory ceramic technology.

G-Cast RP Cast is a new generation, gypsum bonded investment that consistently provides superior, ultra-smooth casting surfaces for a variety of today's pattern materials like waxes, 3D resins and various polymers.

FEATURES

- Low rise under vacuum
- Faster initial set after gloss-off
- Superior temperature resistance in burn-out, up to 1,526°F/830°C
- Reduces porosity and finishing time
- Captures the finest, most delicate details with unparalleled accuracy

2604900

G-Cast Majestic (45 lbs)

\$109.95

Ideal for casting platinum and platinum alloys and its unique formula reproduces excellent surface finish.

G-Cast Majestic is a superior two-part, high temperature investment developed to give premium results for casting platinum, palladium, and stainless steel alloys. Supplies superior consistent results due to its special proprietary additives which eliminate air bubbles, providing a far smoother cast surface.

FEATURES

- Works best on metals and alloys that melt in excess of 2,732°F/1,500°C
- Low rise under vacuum
- Easier to remove than phosphate water mix and other two-part investments
- Special additives to eliminate air bubbles on the casted surface
- Reduces finishing time, saving both time and money
