

Yehuda Sherlock Holmes 4.0

The Ultimate Lab Grown Diamond Detector

Detect 100% of Lab Grown Diamonds

As synthetic diamonds flood the market, the ability to separate lab grown from natural diamonds has become invaluable in the jewelry industry. More than a matter of money, you and your customers deserve to know if a precious stone was formed over a matter of months or billions of years.

With the Yehuda Sherlock Holmes 4.0, you can test up to 27 rings or 250 ct of loose stones at a time to determine 100% of all lab grown diamonds (in the D-K color range), CZ, moissanite, as well as diamond coated CZ and moissanite.
